

HydroFLOW Testimonial

Nellis Air Force Base, Nevada

Technical support provided by Mike Colton
of HydroFLOW West and MBI Water

The following is a testimonial email from the HVAC Controls Systems Foreman at Nellis Air Force Base located in Nevada. A HydroFlow was installed at one of a group of cooling towers at the base in 2015, which resulted in removal of existing scale and subsequent prevention of scale and biofouling.

Chemical treatment applications in the cooling tower were suspended after approximately 60 days from initiating the demonstration, and have not been applied for a sustained period of more than 10 months with no return of scale or biofouling. The cooling tower continues to operate efficiently.

Technical support provided by Mike Colton of HydroFLOW West and MBI Water Solutions.

Subject: HYDROFLOW

Good morning Mr. Bowen,

I have been told that you have expressed interest in the HYDROFLOW device, but like a lot of us were, are skeptical about its ability to accomplish what HYDROFLOW states that it will do.

Because my time is limited to address this, I can tell you in brief that we installed a HYDROFLOW device on one of our cooling towers about a year ago and have not utilized any industrial water treatment chemicals at all in the last 9-10 months of operation.

All scale was removed by the device, there has been no bio fouling or return of scale matter since the removal of chemicals.

I hope this brief message was helpful.

Kind regards,

James Romero
